

Learn about Rhinos!

Black Rhinoceros are one of five rhino species found around the world, all five species are Endangered! Black rhinos live on the savannas of Africa, their favorite foods are grasses and leaves. Black rhinos can go for up to five days without drinking water, getting all moisture they need from succulent plants.

Noses with Horns

All rhinos have horns that are made of keratin, the same stuff as our fingernails! Rhinos use their horn to help them defend themselves and they will sometimes use them for digging and breaking tree branches.

INTERNATIONAL
RHINO
FOUNDATION

The Little Rock Zoo supports the International Rhino Foundation, which helps to protect this endangered species in the wild!
